## 1. GENERAL

This is the hardware specification of the TEAC FD-235HS, 3.5" double-sided 5.3 track/mm [135tpi] micro floppy disk drive (hereinafter referred to as SFD) with a data capacity of $2 \mathrm{MB} / 1 \mathrm{MB}$ ( 2 modes) and a SCSI interface board (hereinafter referred to as FC-1).
For the specification of the software, refer to "FC-1-10 Software Specitication".
The outline of this SFD is shown in Table 1.
(Table 1) Specification outline

| Model name | FD-235HS-1100 |  |
| :---: | :---: | :---: |
| TEAC P/N | 19308111-00 |  |
| ROM P/N | S002617-10 |  |
| Safety standard | UL, CSA \& TÜV |  |
| Operation modes | $1 \mathrm{MB} \mathrm{mode}, \mathrm{write/read}$ | 2MB mode, write/read |
| Disk used | Normal density (DD) | High density (HD) |
| Data transfer rate | 250k bits/s | 500k bits/s |
| Disk speed | 300rpm |  |
| Track density | 5.3 track/mm [135tpi] |  |
| Required power | +5 V single ( $4.75-5.25 \mathrm{~V}$ ) |  |
| Front bezel \& flap | Black |  |
| Eject button | Black |  |
| LED indicator color | Amber |  |
| Signal interface | SCSI (Small Computer System Interface: ANSI standard $\times 3.131-1986$ ) |  |
| Terminator | Provided (at factory), 220/330 $\pm 5 \%$, detachable |  |
| Specification of parity | ON (at factory), ON/OFF switchable |  |
| Specification of SCSI | ID=0 (at factory), SCSI ID 0 to 7 switchable |  |
| Logical Unit Number | LUN $=0$ (at factory) |  |
| Internal data buffer capacity | 31 K bytes |  |

Using two types of disk, this SFD permits two write/read modes with unformatted data capacities of 2M/1M bytes. The interface with the host system is SCSI. The SFD has a switch for the detection of the high density identification hole (HD hole) in the disk and straps for selecting the density mode system (refer to 10.8).
2. BASIC SPECIFICATIONS
(1) Signal interface : Pursuant to the ANSI standard X3.131-1986
(2) System configuration : Multiple initiators connectable
(3) Reselection : Available (LEVEL 2 compatible)
(4) Electrical characteristics : Single-end driver/receiver
(5) Effective commands

TEST UNIT READY RESERVE UNIT
REZERO UNIT
RELEASE UNIT
REQUEST SENSE
MODE SENSE
FORMAT UNIT
START/STOP UNIT
FORMAT TRACK SEND DIAGNOSTIC
READ READ CAPACITY
WRITE READ EXTEND
SEEK WRITE EXTEND
INQUIRY SEEK EXTEND
MODE SELECT
VERIFY
WRITE AND VERIFY
(6) Terminator power

Provided with TERMPWR terminal to supply the interface with TERMPWR.
(7) SCSI ID ADDRESS

Setting 0 through 7 possible with the straps on the board. This is set to 0 at factory.
(8) Parity check

While parity check is always performed on output data from SFD, whether the check to be done or not on input data can be selected with a strap on the board.
(9) Data transfer capacity : 556k bytes/s (Asynchronous transfer)

However, this value is the average transfer speed in the case the host system responds in the shortest time.

## 3. SYSTEM CONFIGURATION

### 3.1 System Configuration

The following system configurations are available with the SCSI interface unit. When more than one target is connected, it is necessary to remove termination resistors except for that at the terminating target.

SINGLE INITIATOR, SINGLE TARGET

SINGLE INITIATOR, MULTITARGET

MULTI INITIATOR, MULTI TARGET
(Fig.1) System configuration

### 3.2 Connection to the Host System

The SFD is either incorporated into the host system of the IBM-PC, IBM-PS/2, etc. and connected to an independent SCSI device or used as part of a subsystem as shown below.
(1) When incorporating the SFD into the host system using daisy chain connection, it is necessary to use the interface cable, the middle part of which is connected to the interface connector. (Refer to Fig.2)

(Fig.2) Daisy chain connection within the host system
(2) When constructing a subsystem, run the cable from the drive connector as shown in Fig.3, then install two sets of connectors onto the back panel of the subsystem. It is desirable that both of the two connectors are connected.

(Fig.3) Daisy chain connection when incorporated into subsystem

* IBM-PC and IBM-PS/2 are trademarks of International Business Machines Corporation.

In each case, the total length of the interface cable(s) used shall not exceed 6 m .
When the interface cable extends out of the system, use shielded cables and connectors which shall protect the signals from radiation noise.
4. DISK
(1) Work disk
$3.5^{\prime \prime}$ micro floppy disks on Table 2 which are mutually agreed between the customer and TEAC.
(Table 2) Disk used

| Operation mode | Disk type | Magnetic powder | Magnetizing method |
| :---: | :---: | :---: | :---: |
| 1 MB | Normal density (DD) | $\mathrm{Co}-\gamma-\mathrm{Fe} 2 \mathrm{O} 3$ | Surface recording |
| 2 MB | High density (HD) | $\mathrm{Co}-\gamma-\mathrm{Fe} 2 \mathrm{O} 3$ | Surface recording |

(2) Cleaning disk

The SFD does not require any cleaning disk. However, the dry type disk which is mutually agreed between the customer and TEAC is used when requiring a cleaning disk.
5. PHYSICAL SPECIFICATIONS

### 5.1 Physical Specifications

(Table 3) Physical specification

| Width | $101.6 \mathrm{~mm}[4.00 \mathrm{in}]$, Nom. |
| :--- | :--- |
| Height | $33.3 \mathrm{~mm}[1.31 \mathrm{in}]$, Nom. |
| Depth | $162 \mathrm{~mm}[6.38 \mathrm{in}]$, Nom. |
| Weight | $480 \mathrm{~g}[1.06 \mathrm{lbs}]$, Nom., $500 \mathrm{~g}[1.10 \mathrm{lbs}]$, Max. |
| External view | See fig.4. |
| Cooling | Natural air cooling <br> Mounting for the following directions are acceptable. <br> (a) Front loading, mounted vertically. <br> (b) Front loading, mounted horizontally with spindle motor down. <br> (c) Mounting angle in items (a) and (b) should be less than $25^{\circ}$ with front <br> bezel up or down. |
| Note: As to the other mounting directions than the above will be con- |  |
| sidered separately. |  |

(Fig.4) External view

### 5.2 Frame Grounding

(1) The SFD frame is electrically connected to DC OV by FG strap on the main PCBA. (See Fig.5)
(2) If it is required to separate the frame from DC OV, set the FG strap to off-state.
(3) If it is required to ground by other cabling method, use M2.6 tapped hole at the rear side of the SFD. (See Fig.4)

(Fig.5) Frame ground internal connection

### 5.3 Nameplate

The location where the nameplate is attached onto the SFD is shown in Fig. 6.

(Fig.6) Location where the nameplate is attached
Note. Although the nameplate is attached on the rear (interface connector side) of the SFD, this nameplate is for the base FDD (the SFD minus the SCSI board, bracket, etc.) and does not indicate the model number, model name or serial number of the SFD.

## 6. FUNCTIONAL SPECIFICATIONS

### 6.1 2MB Mode Data Capacity

(Table 4) 2 MB mode data capacity

| Encoding method |  |  |  | FM | MFM |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Data transfer rate between FC-1 - FDD (k bits/s) |  |  |  | 250 | 500 |
| Tracks/disk |  |  |  | 160 | 160 |
| Innermost track bit density (bpi), Side 1 |  |  |  | 8,717 | 17,434 |
| Innermost track flux density (frpi), Side 1 |  |  |  | 17,434 | 17,434 |
| Data capacity | Unformatted |  | k bytes/track | 6.25 | 12.50 |
|  |  |  | k bytes/disk | 1,000 | 2,000 |
|  | F <br> 0 <br> r <br> m <br> a <br> a <br> t <br> t <br> e <br> d | 32 sectors /track | k bytes/sector | 0.128 | 0.256 |
|  |  |  | k bytes/track | 4.096 | 8.192 |
|  |  |  | k bytes/disk | 655.36 | 1,310.72 |
|  |  | 18 sectors /track | k bytes/sector | 0.256 | 0.512 |
|  |  |  | k bytes/track | 4.608 | 9.216 |
|  |  |  | k bytes/disk | 737.28 | 1,474.56 |
|  |  | 10 sectors /track | k bytes/sector | 0.512 | 1.024 |
|  |  |  | $k$ bytes/track |  | 10.24 |
|  |  |  | k bytes/disk | 819.20 | 1,638.40 |

### 6.2 1MB Mode Data Capacity

(Table 5) 1MB mode data capacity

| Encoding method |  |  |  | FM | MFM |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Data transfer rate between FC-1 - FDD (k bits/s) |  |  |  | 125 | 250 |
| Tracks/disk |  |  |  | 160 | 160 |
| Innermost track bit density (bpi), Side 1 |  |  |  | 4,359 | 8,717 |
| Innermost track flux density (frpi), Side 1 |  |  |  | 8,717 | 8,717 |
| Data capacity | Unformatted |  | k bytes/track | 3.125 | 6.250 |
|  |  |  | k bytes/disk | 500 | 1,000 |
|  | F0oraat$t$$e$$d$$d$ | 16 sectors /track | k bytes/sector | 0.128 | 0.256 |
|  |  |  | k bytes/track | 2.048 | 4.096 |
|  |  |  | k bytes/disk | 327.68 | 655.36 |
|  |  | 9 sectors /track | k bytes/sector | 0.256 | 0.512 |
|  |  |  | k bytes/track | 2.304 | 4.608 |
|  |  |  | k bytes/disk | 368.64 | 737.28 |
|  |  | 5 sectors /track | k bytes/sector | 0.512 | 1.024 |
|  |  |  | k bytes/track | 2.560 | 5.120 |
|  |  |  | k bytes/disk | 409.60 | 819.20 |

### 6.3 Disk Rotation Mechanism

(Table 6) Disk Rotation Mechanism

| Spindle motor | DC brushless motor |
| :--- | :--- |
| Spindle speed | 300 rpm |
| Motor servo method | Frequency servo by ceramic oscillator |
| Motor/spindle connection | Motor shaft direct |
| Disk speed | The same as the spindle speed. |
| Long term speed variation (LSV) | $\pm 1.5 \%$ or less |
| Instantaneous speed variation (ISV) | $\pm 2 \%$ or less |
| Start time | 480 ms or less |
| Average latency | 100 ms |

### 6.4 Index Detection

(Table 7) Index Detection

| Number of index | 1per disk revolution |
| :--- | :--- |
| Detection method | Rotor detection of spindle motor by Hall <br> element or FG output. |
| Detection cycle | $200 \mathrm{~ms} \pm 1.5 \%$ |
| Index burst detection timing error (with specified test disk) | $\pm 400 \mu \mathrm{~s}$ or less |

### 6.5 Track Construction

(Table 8) Track Construction

| Track density | 5.3 track/mm [135tpi] (track pitch $187.5 \mu \mathrm{~m}$ ) |
| :--- | :--- |
| Number of cylinders | 80 cylinders |
| Number of tracks | 160 tracks/disk |
| Outermost track radius(track 00) | Side $039.500 \mathrm{~mm}[1.5551 \mathrm{in}]$ |
|  | Side $138.000 \mathrm{~mm}[1.4961 \mathrm{in}]$ |
| Innermost track radius(track 79) | Side $024.6875 \mathrm{~mm}[0.9719 \mathrm{in}]$ |
|  | Side $123.1875 \mathrm{~mm}[0.9129 \mathrm{in}]$ |
| Positioning accuracy | $\pm 15 \mu \mathrm{~m}$ or less, with specified test disk <br> (Track $40,23 \pm 2^{\circ} \mathrm{c}, 45 \sim 55 \%$ RH, horizontal) |

### 6.6 Magnetic Head

(Table 9) Magnetic Head

| Magnetic head | Read/write head with erase gap, 2 sets |
| :--- | :--- |
| Effective track width after trim erase | $0.115 \pm 0.008 \mathrm{~mm}[0.0045 \pm 0.0003$ in] |
| Read/write gap azimuth error | $0^{\circ} \pm 18^{\prime}$, with specified test disk |

## 6．7 Track Seek Mechanism

（Table 10）Track Seek Mechanism

| Head position mechanism | Stepping motor and lead screw |
| :--- | :--- |
| Stepping motor | 4－phase，20 steps per revolution |
| Stepping motor drive | 2 steps per track |
| Track 00 detection method | Photo－interrupter |
| Track to track time | 3ms（excludes setting time） |
| Set ting time | 15ms or less（excludes track to time） |
| Average track seek time | 94ms（includes setting time） |

## 6．8 Others

（Table 11）Others

| Recommendable write pre－compensation |  |
| :---: | :---: |
| 【2MB mode】 | $\pm 125 \mathrm{~ns}$ |
| 【1MB mode】 | 0－$\pm 125 \mathrm{~ns}$ |
| Head load mechanism | Not equipped（The FDD becomes head load con－ dition whenever a disk is installed．） |
| File protect mechanism | Detection of write inhibit hole by switch |
| Disk detection mechanism | Detection of disk installation by switch |
| Disk inserting force | 6.86 N ［700g］or less at the center of disk |
| Disk ejecting force | 13.73 N ［1400g］or less |
| Acoustic noise at 50 cm | 50 dBA or less at 3ms or 4ms seek operation |
| Disk type descriminating mechanism | Detection of HD hole by switch |
| Auto－recalibration | Automatic recalibration to track 00 is executed im－ mediately after power－on． |

## 7. ENVIRONMENTAL CONDITIONS

(Table 12) Environmental Condition

|  | Operating | Storage | Transportation |
| :---: | :---: | :---: | :---: |
| Ambient temperature | $4 \sim 51.7^{\circ} \mathrm{C}$ [39~125 $\left.{ }^{\circ} \mathrm{F}\right]$ | $-22-60^{\circ} \mathrm{C}\left[-8-140^{\circ} \mathrm{F}\right]$ | $-40-65^{\circ} \mathrm{C}$ [-40-149 $\left.{ }^{\circ} \mathrm{F}\right]$ |
| Temperature gradient | $20^{\circ} \mathrm{C}\left[68^{\circ} \mathrm{F}\right]$ or less per hour | $30^{\circ} \mathrm{C}$ [ $86^{\circ} \mathrm{F}$ ] or less per hour | $30^{\circ} \mathrm{C}$ [ $\left.86^{\circ} \mathrm{F}\right]$ or less per hour |
| Relative humidity | $20-80 \%$ <br> (no condensation) Max. wet bulb temperature shall be $29.4^{\circ} \mathrm{C}$ [ $85^{\circ} \mathrm{F}$ ] | $5-90 \%$ <br> (no condensation) Max. wet bulb temperature shall be $40^{\circ} \mathrm{C}\left[104^{\circ} \mathrm{F}\right]$ | $5 \sim 95 \%$ <br> (no condensation) Max. wet bulb temperature shall be $45^{\circ} \mathrm{C}$ [113 $\left.{ }^{\circ} \mathrm{F}\right]$ |
| Vibration | $14.7 \mathrm{~m} / \mathrm{s}^{2}$ [1.5G] or less ( $10-100 \mathrm{~Hz}, 1$ octave/m sweep rate) |  | $19.6 \mathrm{~m} / \mathrm{s}^{2}$ [2G] or less (10~100Hz, $1 / 4$ octave/m sweep rate) |
|  | $4.9 \mathrm{~m} / \mathrm{s}^{2}[0.5 \mathrm{G}]$ or less ( $100 \sim 200 \mathrm{~Hz}, 1$ octave/m sweep rate) |  |  |
|  | $2.45 \mathrm{~m} / \mathrm{s}^{2}[0.25 \mathrm{G}]$ or less (200~600Hz, 1 octave/m sweep rate) |  |  |
| Shock | Write \& read: $49 \mathrm{~m} / \mathrm{S}^{2}$ [5G](11ms, $1 / 2$ sine wave) or less |  | $490 \mathrm{~m} / \mathrm{S}^{2}[50 \mathrm{G}]$ <br> ( $11 \mathrm{~ms}, 1 / 2$ sine wave) or less |
|  | Read only: $98 \mathrm{~m} / \mathrm{S}^{2}$ [10G](11ms, $1 / 2$ sine wave) or less Soft errors are allowed if they are recoverable within 16 retries. |  |  |
| Altitude | $\begin{aligned} & -300 \mathrm{~m}[-980 f e \mathrm{fet}] \sim \\ & 5,000 \mathrm{~m}[16,400 \text { feet }] \end{aligned}$ |  | $\begin{aligned} & 12.000 \mathrm{~m}[40.000 \text { feet] or } \\ & \text { less } \end{aligned}$ |
|  | Notes: The above requirements are applied for the FDD without shipping box. When a long period is required for transportation such as by ship, storage environmental conditions should be applied. |  |  |

## 8. RELIABILITY

(Table 13) Reliability

| MTBF | 30,000 power on hours or more (for typical operation duty) |
| :--- | :--- |
| MTTR | 30 minutes or less |
| Design component life | 5 years |
| Disk life | $3 \times 10^{6}$ passes/track or more |
| Disk insertion | $1.5 \times 10^{4}$ times or more |
| Seek operation | $1 \times 10^{7}$ random seeks or more |
| Preventive maintenance | Not required (for typical operation duty) |
| Error rate | Soft error |
|  | 1 or less per $10^{8}$ bits read <br> In the event of error, retry is performed up to 16 times automati- <br> cally, including three recalibrations to track 00. |
|  | 1 or less per $10^{12}$ bits read <br> In the event of error, retry is performed up to 16 times automati- <br> cally, including three recalibrations to track 00. |
|  | Seek error |

## 9. POWER INTERFACE

### 9.1 Required Power

The following specifications are applied at interface connector of the SFD. Power is fed to the FC-1 via the signal interface cable ( 7,9 and 11 pins) between FC- 1 and FDD.
(1) $\mathrm{DC}+12 \mathrm{~V}$ : Not required
(2) $D C+5 V$
(a) Voltage tolerance: $\pm 5 \%(4.75 \sim 5.25 \mathrm{~V})$
(b) Allowable ripple voltage: 100 mVp -p or less (including spike noise)
(c) Current and power consumption
(Table 14) Current and power consumption

| Operating mode | Average current |  | Average power |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  |  | Typ. | Max. | Typ. | Max. |
| Stand-by | ${ }^{*} 1$ | 85 mA | 105 mA | 0.43 mW | 0.55 mW |
| Read operation | ${ }^{*} 1$ | 0.36 A | 0.46 A | 1.80 W | 2.42 W |
| Write operation | ${ }^{\star} 1$ | 0.36 A | 0.46 A | 1.80 W | 2.42 W |
| Seek operation | ${ }^{\star 1}$ | 0.54 A | 0.63 A | 2.70 W | 3.31 W |
| Spindle motor start | ${ }^{*} 1$ | 0.70 A | 0.77 A | 3.50 W | 4.04 W |
| Terminator Current | ${ }^{\star 2}$ | 0.16 A | 0.30 A | 0.80 W | 1.58 W |

The current values of items marked *1 indicate those without the terminator.
The current values with the terminator will be those to which terminator current values marked *2 are added.
Notes:

1. Values of Typ. current and power are specified at 5.0 V , while the values of Max. are at $5.25 \mathrm{~V}(+5 \%)$ with a disk of large running torque.
2. Stand-by mode is defined at the stop condition of spindle motor and seek operation.
3. Rush current flows within 150 ms after the motor start.
4. Short time peak current except for power-on surge is less than 1.3A.

### 9.2 Power Interface Connector and Cable

(1) Power interface connector
(Table 15) Power interface connector

| SFD side connector | HONDA TSUSHIN KOGYO Co. Ltd., P/N Z-419E or equivalent |
| :--- | :--- |
| Pin numbers | 4 pins |
| Protection method for <br> mis-connection | Mechanical protection by the shape of connector housing |
| Connector external view | See Fig.7. |
| Connector location | See Fig.4. |
| Power interface connections | Scc Table 16. |
| Cable side matched <br> connector | AMP P/N 171822-4 (natural color) or equivalent |
| Cable side matched pin | AMP P/N 170204-2 (AWG\#20~26, loose piece) or P/N 170262-2 <br> (AWG\#20~26, strip form) or equivalent |

(2) Power interface cable
: Any appropriate cables taking the maximum power consumption of the SFD will be acceptable.
(Table 16) Power intertace pin-assignment

| Power voitage | Pin numbers |
| :---: | :---: |
| $\mathrm{DC}+5 \mathrm{~V}$ | 1 |
| 0 V | 2 |
| (OV) | 3 |
| (No conection) | 4 |

Rear view

(Fig.7) Power interface connector external view
10. SIGNAL INTERFACE
10.1 Electrical Characteristics

Notes: 1. The specifications are applicable at the SCSI connector.
2. Vcc indicates the +5 V supply voltage to be fed to the SFD.
(Table 17) SFD side I/O circuit

| 1/O circuit |  |  | See Fig.8~11 |
| :---: | :---: | :---: | :---: |
| Electrical characteristics of I/O circuit | Input signal level | logic"1" (TRUE) | 0~0.8V |
|  |  | logic"0" (FALSE) | 2.0V-5.25V |
|  | Output signal level | logic"1" (TRUE) | 0-0.5V |
|  |  | logic"0" (FALSE) | 2.0V-5.25V |
|  | Maximum load current receiver |  | -0.4mA (excluding terminator current) |
|  | Output driver sink current |  | 48 mA (low level voltage: 0.5 V ) |
|  | Terminator |  | $\begin{aligned} & 220 \Omega \pm 5 \% \text { (at } \mathrm{DC}+5 \mathrm{~V} \text { side) } \\ & 330 \Omega \pm 5 \% \text { (at } 0 \mathrm{~V} \text { side) } \\ & \text { (Terminator is detachable) } \end{aligned}$ |
|  | TERMPWR output signal | Output voltage | $4.2-5.25 \mathrm{~V}$ |
|  |  | Maximum output current | 1.0A |
|  |  | Output current limitation | Fuse (1.0A) |

(Fig.8) RESET input circuit

(Fig.9) Other input circuit

(Fig.10) Output circuit

(Fig.11) TERMPWR output circuit

### 10.2 Sigani Interface Connector and Cable

(1) Signal interface connector
(Table 18) Signal interface connector

| SFD side connector | IRISO ELECTRONICS Co., Ltd. IMSA-6032B-2-49Z015-GF or <br> equivalent |
| :--- | :--- |
| Pin numbers and pin pitch | 2 rows of 25 poles (49 poles), 2.54mm(0.1 in) pitch |
| Interface connection | See Table 20 |
| Cable side matched <br> connector | FUJITSU, P/N FCN-747B034-AU/B (closed end) or -AU/O (daisy <br> chain) or equivalent. |
| Cable side mis-insertion <br> protection key | FUJITSU, P/N FCN-707J050-AU/O orequivalent. |
| Connector location | See Fig.4 |

(2) Signal interface cable
(Table 19) Signal interface cable

| Applicatlon cable | SUMITOMO 3M, P/N 3365-50 or equivalent |
| :--- | :--- |
| Maximum cable length | $6 \mathrm{~m}(20$ feet $)$ |

(Table 20) Signal connector terminal number table

| Terminal No. |  | Signal name | Symboi | Signal direction |
| :---: | :---: | :---: | :---: | :---: |
| GND | DATA |  |  |  |
| 1 | 2 | DATA BUS 0 (LSB) | -DB0 | $\mathrm{HOST} \leftrightarrow \mathrm{FC}-1$ |
| 3 | 4 | DATA BUS 1 | -DB1 | $\leftrightarrow$ |
| 5 | 6 | DATA BUS 2 | -DB2 | $\leftrightarrow$ |

### 10.3 Input and Output Signals

For the signals indicated below, an input signal represents a signal transmitted to FC-1 and an output signal, a signal transmitted from FC-1.
Input/output signal represents a bidirectional signal. All the signals are TRUE at low level.
(1) BUSY (-BSY): input/output signal This signal is used in the following three ways.
(a) This signal goes true when the SCSI interface bus is in use.
(b) If the FC-1 attemps to gain control of the SCSI bus in the arbitration phase, this signal goes true.
(c) This signal is a response signal to the -SEL signal from the host system or the SFD in the selection phase and reselection phase.
(2) SELECT (-SEL): input/output signal

This is to select one out of the devices on the interface bus. The selected device responds with its -BSY signal turned to TRUE. Device address information is delivered to -DBO ~ -DB7 together with this signal.
(3) CONTROL/DATA (-C/D): output signal Indicates the type of information to be transferred through -DBO ~ -DB7. Control information is transferred when this signal is TRUE and data information when it is FALSE
(4) INPUT/OUTPUT (-1/O): output signal Indicates direction of the information transferred through -DBO ~ -DB7.
Transfer takes place from FC- 1 to the host system when this signal is TRUE and from the host system to FC-1 when it is FALSE.
(5) MESSAGE (-MSG): output signal

This signal is turned to TRUE in the MESSAGE Phase where information is exchanged between the host system and FC-1. The direction of message transfer is indicated by the I/O signal.
(6) REQUEST (-REQ): output signal

Controls transfer timing at which the information is transferred through -DBO ~ -DB7 (for handshake control) and is a data transfer request signal.
(7) ACKNOWLEDGE (-ACK): input signal

Controls transfer timing at which the information is transferred through -DB0 ~ -DB7 (for handshake control) and is a response signal to the -REQ signal.
(8) ATTENTION (-ATN): input signal

Requests reception of a message sent from the host system. MESSAGE OUT Phase is executed when $\mathrm{FC}-1$ receives this signal.
(9) RESET (-RST): input signal

Restores the initial state of FC-1. This signal must have a $25 \mu \mathrm{~s}$ or more pulse width.
Within 800ns after this signal becomes TRUE, the FC-1 enters BUS FREE phase. However, the response time (point (b) onward in Fig. 10-18) to the FC-1 initiator selection will be in the following condition maximum 3.3 sco after this signal becomes TRUE.
(a) While WRITE/READ-related commands are in execution, duration lasts until the date in the buffer memory ( 31 KB ) becomes empty or full.
(b) The initial state operation of the FC-1 after (a) is over.

Therefore, if blocks that exceed 31 KB are specified to the FC-1 in WRITE command and the RESET signal becomes true during processing, part of the date may not be processed.
(10) DATA BUS 0-7 (-DBO ~-DB7): input/output signal

8 -bit bidirectional bus for mutural transfer of control and data information. -DB7 is the MSB
(Most Significant Bit) and -DBO the LSB (Least Significant Bit).
(11) DATA BUS PARITY (-DBP): input/output signal

Parity signal for -DB0 ~ -DB7 signals. When information is sent from FC-1, it is set up as odd parity and output with the same timing as -DB0 ~ -DB7.
When FC-1 receives information, whether parity checking (odd parity) should be done or not can be selected by setting a swicth in FC-1.

### 10.4 Phase Sequence

This interface consists of the following operation phases.
(a) BUS FREE Phase
(b) ARBITRATION Phase
(c) SELECTION Phase
(d) RESELECTION Phase
(e) COMMAND Phase
(f) DATA Phase
(g) STATUS Phaso

The phase sequences are shown in Fig.13. There are sequences with and without ARBITRATION. The commands for FC-1 are executed with the sequences shown in Fig.13, though DATA Phase may not be available for some commands. Even for a command with data transfer, DATA. Phase may not be available or may be discontinued depending on error information.

Host system without ARBITRATION

Host system with ARBITRATION

### 10.5 Interface Timing

The following specifications are all applied to the ends of the FC-1 interface connectors.

| (1) RESET timing | $:$ Fig. 14 |
| :--- | :--- |
| (2) BUS FREE Phase timing | $:$ Fig. 15 |
| (3) ARBITRATION Phase timing | $:$ Fig. 16 |
| (4) SELECTION Phase timing | $:$ Fig. 17 |
| (5) RESELECTION Phase timing | $:$ Fig. 18 |
| (6) COMMAND Phase timing | $:$ Fig. 19 |
| (7) DATA IN Phase timing | $:$ Fig. 20 |
| (8) DATA OUT Phase timing | $:$ Fig. 21 |
| (9) STATUS Phase timing | $:$ Fig. 22 |
| (10) MESSAGE IN Phase timing | $:$ Fig. 23 |
| (11) MESSAGE OUT Phase timing | : Fig. 24 |

In Fig. 14 to Fig.24, 'H' denotes high level (logic ' 0 ' FALSE) and 'L', low level (logic '1' TRUE).

| Symbol | Description of symbol | MIN. | TYP. | MAX. | Unit |
| :---: | :--- | :---: | :---: | :---: | :---: |
| T1 | BUS CLEAR DELAY |  |  | 800 | ns |
| T2 | RESET HOLD | 25 |  |  | $\mu \mathrm{~s}$ |
| T3 | BUS SETTLE DELAY | 400 |  |  | ns |

(Fig.14) RESET timing

| Symbol | Description of symbol | MIN. | TYP. | MAX. | Unit |
| :---: | :--- | :---: | :---: | :---: | :---: |
| T3 | BUS SETTLE DELAY | 400 |  |  | ns |
| T4 | T3 + BUS CLEAR DELAY |  |  | 1.2 | $\mu \mathrm{~s}$ |

(Fig.15) BUS FREE PHASE timing

Notes: 1. Broken line *1 indicates the case in which a -BSY signal is already sent from another SCSI device and its ID bit is sent to the data bus.
2. Broken line * 2 indicates the case in which an ID bit with higher order than itself is sent to the data bus. Data bus drive is discontinued at the same time.
3. T1 and the broken line *3 indicate the case in which the FC-1 takes part in the ARBITRATION and a SEL signal is transmitted from another SCSI device before inspection of -DB0 ~-DB7. Data bus drive is discontinued at the same time.
(Fig.16) ARBITRATION PHASE timing

| Symbol | Description of symbol | MIN. | TYP. | MAX. | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: |
| T7 | (DESKEW DELAY) $\times 2$ | 90 |  |  | ns |
| T8 |  | 0 |  |  | ns |
| T9 | BUS SETTLE DELAY | 0.4 |  | 200 | $\mu \mathrm{~s}$ |
| T10 |  | 25 |  |  | $\mu \mathrm{~s}$ |

Notes: 1. Broken line *1 indicates the case in which this phase has been entered after BUS FREE PHASE (without ARBITRATION).
2. MAX. on *2 indicates a selection abort time
(Fig.17) SELECTION PHASE timing

| Symbol | Description of symbol | MIN. | TYP. | MAX. | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: |
| T3 | BUS SETTLE DELAY <br> or SELECTION TIMEOUT | 400ns |  | $200 \mu \mathrm{~s}$ |  |
| T7 | (DESKEW DELAY) $\times 2$ | 90 |  |  | ns |
| T50 |  | 65 |  |  | $\mu \mathrm{s}$ |
| T11 | SELECTION TIMEOUT | 250 |  |  | ms |
| T12 | SELECTION ABORT TIME <br> $+($ DESKEW DELAY) $\times 2$ | 200.09 |  |  | $\mu \mathrm{s}$ |

Note: T11, T12 and the broken line indicate the case in which there is no -BSY response from the host (timeout).
(Fig.18) RESELECTION PHASE timing

| Symbol | Description of symbol | MIN. | TYP. | MAX. | Unit |
| :---: | :--- | :---: | :---: | :---: | :---: |
| T13 | DESKEW DELAY |  |  | 45 | ns |
| T14 | BUS SETTLE DELAY <br> + DATA RELEASE DELAY | 800 |  |  | ns |
| T15 | DESKEW DELAY + CABLE SKEW | 55 |  |  | ns |
| T16 |  | 0 |  |  | ns |
| T 17 |  | 0 |  |  | ns |
| T 19 |  | 0 |  |  | ns |

Notes: 1. For the broken line ${ }^{* 1}$, the FC-1 frees the data bus at the timing of T13.
2. The broken line * 2 indicates the timing at which the host transmits an -ATN signal in this phase.
(Fig.19) COMMAND PHASE timing

| Symbol | Description of symbol | MIN. | TYP. | MAX. | Unit |
| :---: | :--- | :---: | :---: | :---: | :---: |
| T14 | BUS SETTLE DELAY <br> + DATA RELEASE DELAY | 800 |  |  | ns |
| T15 | DESKEW DELAY + CABLE SKEW | 55 |  |  | ns |
| T 16 |  | 0 | 70 |  | ns |
| T 17 |  | 0 |  |  | ns |
| T 18 | DATA RELEASE DELAY |  |  | 400 | ns |
| T19 |  | 0 |  |  | ns |

Notes: 1. For the case of the broken line *1, the host must free the data bus at the timing of T18. At this time, the FC-1 drives the data bus after (T18 or T14) + internal proccssing time.
2. The broken line * 2 indicates the timing at which an -ATN signal is transmitted at the end of this phase.
(Fig.20) DATA IN PHASE timing

Notes: 1. For the case of the broken line ${ }^{* 1}$, the FC-1 frees the data bus at the timing of T13.
2. The broken line *2 indicates the timing at which an -ATN signal is transmitted in this phase.
(Fig.21) DATA OUT PHASE timing

| Symbol | Description of symbol | MIN. | TYP. | MAX. | Unit |
| :---: | :--- | :---: | :---: | :---: | :---: |
| T14 | BUS SETTLE DELAY <br> + DATA RELEASE DELAY | 800 |  |  | ns |
| T15 | DESKEW DELAY + CABLE SKEW | 55 |  |  | ns |
| T16 |  | 0 | 70 |  | ns |
| T17 |  | 0 |  |  | ns |
| T18 | DATA RELEASE DELAY |  |  | 400 | ns |
| T19 |  | 0 |  |  | ns |

Notes: 1. For the case of the broken line *1, the host must free the data bus at the timing of T18. At this time, the FC-1 drives the data bus after (T14 or T18) + internal processing time.
2. The broken line * 2 indicates the timing at which an -ATN signal is transmitted at the end of this phase.
(Fig.22) STATUS PHASE timing

| Symbol | Description of symbol | MIN. | TYP. | MAX. | Unit |
| :---: | :--- | :---: | :---: | :---: | :---: |
| T14 | BUS SETTLE DELAY <br> + DATA RELEASE DELAY | 800 |  |  | ns |
| T15 | DESKEW DELAY + CABLE SKEW | 55 |  |  | ns |
| T16 |  | 0 | 70 |  | ns |
| T17 |  | 0 | . |  | ns |
| T18 | DATA RELEASE DELAY |  |  | 400 | ns |
| T19 |  | 0 |  |  | ns |

Notes: 1. For the case of the broken line ${ }^{*} 1$, the host must free the data bus at the timing of T18. At this time, the FC-1 drives the data bus after (T14 or T18) + internal processing time.
2. The broken line * 2 indicates the timing at which an -ATN signal is transmitted when the host requests re- transfer of the MESSAGE.
(Fig.23) MESSAGE IN PHASE timing

| Symbol | Description of symbol | MIN. | TYP. | MAX. | Unit |
| :---: | :--- | :---: | :---: | :---: | :---: |
| T8 |  | 0 |  |  | ns |
| T13 | DESKEW DELAY |  |  | 45 | ns |
| T14 | BUS SETTLE DELAY <br> + DATA RELEASE DELAY | 800 |  |  | ns |
| T15 | DESKEW DELAY + SKEW | 55 |  |  | ns |
| T16 |  | 0 | 70 |  | ns |
| T17 |  | 0 |  |  | ns |

Note: For the case of the broken line, the FC-1 frees the data bus at the timing of T13.
(Fig.24) MESSAGE OUT PHASE timing

### 10.6 Control Sequence

10.6.1 Initialized state when the power is switched on or reset
(1) Protection of written data In the transient period when the +5 V power is lower than 3.5 V , the SFD is protected against miswriting and miserasing whatever the state of input signals are.
(2) Auto-recalibration

Auto-recalibration is executed (head moves to track 00) immediately after the power-on or reset.
(3) Motor starting state

The moment the unit is bootstrapped, the motor turns ON. However, it stops five seconds later. The subsequent control is performed by the command from the host.
(4) Self-diagnosis

The moment the power is switched on or reset, the foliowing items are checked. In the event of an abnormality, HARDWARE ERROR (ADDITIONAL SENSE CODE = AO - A2h) is issued in response to the command given first, terminating in a check condition. If control is continued disregarding this, operation is not guaranteed.
(a) Read/write check of the buffer RAM and $1 / O$ port
(b) Specified check of straps
(c) Check of whether or not terminator power is supplied
(5) Mode select state In the initialized state, the high-density mode is set.

| Operation mode | $: H(2 M B)$ |
| :--- | :--- |
| No. of sectors | $: 18$ sectors/track |
| Block length | $: 512$ bytes/sector |
| Recording method | $:$ MFM |

If operation is to be done with the above setting, there is no need to issue a new mode select command.
(6) FC-1 reset sequence after the power is switched ON.

(Fig.25) Internal reset time

Notes: 1. SFD doesn't respond to the section occurring between (a) and (b).
2. The selection occurring between (B) and (C) shifts phases in the order STATUS (BUSY) $\rightarrow$ MESSAGE IN (COMMAND COMPLETE) $\rightarrow$ BUS FREE. When the RESET signal of SCSI turned to true at (a), the shift is the same.
3. *: When the head position of the SFD is at track 79.

### 10.6.2 Disk Installation

(1) The moment a disk is installed, the spindle motor automatically starts rotating, during which chucking of the disk hub is performed.
(2) The auto-chucking is completed within 600 ms .

(Fig.26) Disk installation and motor rotation
10.6.3 Current consumption profile

(Fig.27) Typical average current profile

### 10.7 Setting the Mode for the SFD

When setting the mode of this SFD, mode can be selected by one of the following two methods by using the straps on the FC-1 board and FDD main board.

### 10.7.1 Method A

Method $A$ indicates that the following operation is possible and the unit is factory-preset by method $A$.
(1) The initiator can detect the medium type (DD/HD) now loaded in the SFD.
(2) Based on the result of (1), the initiator can set the mode according to the type of medium loaded. The FC-1 can set two FDD density modes using the FDD interface signal (HD IN signal) shown in Table 21.
(Table 21) FDD density mode setting input/output signals

| FDD interface signal | Signal direction | Meaning of the signal |
| :--- | :---: | :---: |
| HD IN signal | FC-1 $\rightarrow$ FDD | 2MB mode setting signal |
| HD OUT signal | FC-1 $\leftarrow$ FDD | HD hole identification signal |

(3) The initiator can recover in even a special case where a disk loaded is written with inherently the wrong density.
For example, read or write of $H D$ medium written in the 1 MB mode is possible though reliability is low.
(4) Procedure

SCSI interface
FDD interface

Procedures: (1) The initiator executes the MODE SELECT command by making the Medium Type of the HEADER section 02h (Media identification code). (when in POWER ON, SCSI RESET or DISK CHANGE)
(2) The FC-1 sets the mode inside the FC-1 by referring to the media identification input signal (HD OUT signal) from the FDD.
(3) The initiator can detect the media loaded in the FDD with the HEADER section of the MODE SENSE data, Medium Type by executing the MODE SENSE command.
HD media: 88h, DD media: 80h
(4) The initiator executes the MODE SELECT command before the next write or read action based on the execution result of (3).
(5) The FC-1 sets the mode of the FDD (including the HD IN signal) by the MODE SELECT parameter of (4).

Note: If the initiator needs not detect the type of medium now loaded in the SFD, (1) to (3) above can be omitted.

### 10.7.2 Method B

Method $B$ indicates the following operations are possible.
(1) The initiator can detect the medium type (DD/HD) now loaded in the SFD.
(2) By identifying whether or not there is a HD hole on the disk loaded, the SFD automatically sets the 1 MB ( DD ) or $2 \mathrm{MB}(\mathrm{HD})$ mode.
The initiator can only set mode for the SFD with respect to the PAGE parameter.
(3) The initiator cannot roscuo in a special case where a disk loaded is written with the inherently wrong density.
(4) Procedure

SCSI interface $\quad$ FDD interface

Procedures: (1) The initiator executes the command in the DISK LOAD status (excluding the INQUIRY and REQUEST SENSE commands).
(2) The FC-1 sets the mode inside the FC-1 referring to the media identification input signals (HD OUT signal) from the FDD and executes the command (1) based on it.
(3) The initiator can detect the MODE setting status (including the medium loaded in the FDD) of the current FC- 1 from the MODE SENSE command. The HEADER section of the MODE SENSE data (Current rate), Medium Type is as follows. HD media: 88h, DD media: 80h

Note: To set mode including the PAGE 5 parameter, the initiator executes the MODE SELECT command by making the Medium type of the HEADER section 00 h or 02 h .

### 10.8 Customer Selectable Straps

### 10.8.1 Straps setting on the FC-1 board

There are straps on the FC-1 board as shown in Fig. 28 and the state where the shorting bar is inserted is the on state. Their functions are described below. Factory-set is follows.

(Shown when viewed from the chip side)
(Fig.28) Straps arrangement
(1) ID Straps Setting

Performs SCSI ID setting with "IDO", "ID1", and "ID2" on the PCBA. The relation between "IDO ID2" settings and the SCSI ID addresses are shown in Table 22.
"IDO ~ ID2" are all factory-set to "ON" (device address = 0).
(Table 22) SCSI ID setting

| SCSI ID ADDRESS | ID2 | ID1 | IDO |
| :---: | :---: | :---: | :---: |
| 0 | ON | ON | ON |
| 1 | ON | ON | OFF |
| 2 | ON | OFF | ON |
| 3 | ON | OFF | OFF |
| 4 | OFF | ON | ON |
| 5 | OFF | ON | OFF |
| 6 | OFF | OFF | ON |
| 7 | OFF | OFF | OFF |

(2) SCSI parity strap
"PAR" on the PCBA is the parity strap. When "PAR" is ON, the FC-1 performs parity checking (odd number) of input data (-DB0 ~ -DB7, -DBP). Parity checking does not take place when "PAR" is OFF.

It is factory-set to "ON".
(3) $\mathrm{J} / \mathrm{H} / \mathrm{G} / \mathrm{S} 1 / \mathrm{H} 1 / \mathrm{G} 1 / \mathrm{H} 2 / \mathrm{G} 2$ straps

These straps indicate an FDD type as shown in Table 10-4 and the LUN 0 FDD type is set by $\mathrm{J} / \mathrm{H} / \mathrm{G}$ straps, the LUN 1 FDD. type by J1/H1/G1 straps or the LUN 2 FDD type by H2/G2 straps.
Here, the tMB mode is valid at all times irrespective of the LUN number.
Strap " H " is factory-preset to ON .
(Table 23) Setting the FDD type

| Strap | $\mathrm{G} / \mathrm{G} 1 / \mathrm{G} 2$ | $\mathrm{H} / \mathrm{H} 1 / \mathrm{H} 2$ | $\mathrm{~J} / \mathrm{J} 1$ |
| :--- | :---: | :---: | :---: |
| Mode | 1.6 MB mode | 2 MB mode | 4 MB mode |

(4) HDS strap

Sets the initial state whether or not the mode auto setting function according to the disk type loaded in the SFD is valid using the HDS strap. If the HDS strap is ON, it is necessary to set the H1/H2 straps.
The strap is factory-preset to OFF.
"HDS": ON .... Valid
OFF .... Invalid
(5) EJC strap
(Setting the output signal at pin 4 in the FD IF)
Sets the initial state whether or not the media eject function is valid using the EJC strap.
The strap is factory-preset to OFF and it is not possible to change this strap.
"EJC": ON .... Valid
OFF .... Invalid

### 10.8.2 Strap setting on the FDD main board

The straps on the FDD main board and an outline of their functions are given in Table 24. If the settings of straps other than HA/IR/FG on the FDD main board are changed, the operation of this SFD is not guaranteed.

| Position | Name | Outline of functions |
| :---: | :---: | :--- |
| $(1)$ | DSO | DRIVE SELECT O input |
| $(2)$ | DC34 | PIN 34: DISK CHANGE output |
| $(3)$ | HO2 | PIN 2: HD OUT output |
| $(4)$ | HI2 | PIN 2: HD IN input |
| $(5)$ | HA | Sets FDD automatic density using <br> the HD hole |
| (6) | REN | Auto-recalibration enable |
| $(7)$ | IR | LED active condition: <br> DRIVE SELECT * READY state |
| (8) | FG | Frame ground |

Note: The shaded positions are the factory-preset positions.
(Table 24) Straps on the FDD main board and their functions
(1) $\mathrm{HA} / \mathrm{HI} 2 / \mathrm{HO} 2$ straps

By combining $\mathrm{HA} / \mathrm{HI} 2 / \mathrm{HO} 2$ straps on the FDD main board with HDS strap on the FC-1 board, users can select the mode setting methods shown in Table 25. The factory-preset mode setting method is A.
For details of how to set the method of the SFD, refer to 10.7.
(Table 25) Strap setting when mode is selected

| Mode setting method | Strap setting |  |  |  | Setting mode | FDD density mode setting signal level | Medium identification signal level |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | FC-1 | FDD |  |  |  |  |  |  |
|  | HDS | H2 | HO2 | HA |  | $\begin{gathered} \text { HD IN } \\ { }_{\star}(\mathrm{PIN} 2) \end{gathered}$ | HD OUT |  |
|  |  |  |  |  |  |  | *(PIN 4) | *(PIN 2) |
| A | OFF | ON | OFF | OFF | 1 MB | LOW | LOW | - |
| A |  |  |  |  | 2.0 MB | HIGH | HIGH | - |
| B | ON | OFF | ON | ON | 1 MB | - | - | LOW |
|  |  |  |  |  | 2.0 MB | - | - | HIGH |

Note: With PIN 2 and 4 (marked "*") of the FDD interface signal, the meaning and true level are defined by bytes 26 and 27 of PAGE code 5 of the MODE SELECT parameter.
(2) IR strap

With the IR strap, one of the following two front bezel indicator (LED) lighting conditions can be selected.
However, to prevent the lighting due to the polling operation of the DRIVE SELECT signal, the indicator does not light for 3.1 ms immediately after the DRIVE SELECT signal is made true under any conditions.
(Table 26) Selecting the front bezel indicator lighting conditions

| IR strap | Front bezel indicator (LED) lighting conditions |
| :---: | :--- |
| - | DRIVE SELECT |
| ON | DRIVE SELECT * FDD READY state |

Note: Symbol of "-" indicates the state when the strap = OFF.
(3) FG strap

Connects the FDD frame to OV DC. (For details, refer to 5.2)
